COURSE INFORMATION

This course is presented by Kleinskuur Aquaponics, recognised experts with a decade of practical experience in the field. In this course you will learn the why and how of aquaponics, starting from why we need healthy food, to what makes an aquaponic system work well, how to manage the fish and plants in your system, right through to the business side of things. After this course you will understand the design principles of a working aquaponic system and can apply the knowledge of growing fish and vegetables in aquaponics. You will spend a day visiting a working farm, the remaining two days will consist of theory, including marketing of produce and how to prepare a basic business plan.

This short course will be useful for aspiring aquaponic farmers, and everyone who already has a system going, as well as those wanting to increase their knowledge of farming with nature.
